

## ***EMP Malaysia* to market Oil Belt/Rope Skimmers to Oil Palm Industry and Environmental Sectors**

***EMP Malaysia*** recently discussed marketing and sales tie-up with a reputable American company to market their range of Belt & Rope Oil Skimmers in Malaysia. These belt and rope oil skimmers can be used to recover oil from sludge pits and oxidation ponds. They can also be used in the environmental sectors where the recovery of oil from water is paramount.

By recovering oil from sludge pits and oxidation ponds, the environment can be cleaner and treatment of these ponds can be minimised.

The skimmers are engineered to be simple and by using a specially formulated material, the belt/rope will pick up oil from the water surface. The recovered oil will be squeezed out into a container where it can be recycled.
